

External Wireless Access Point Installation Campus Maps

Please note the following site maps give the approximate region where the 82 Aruba External Access Points are to be mounted and data runs pulled to within each location. In almost all locations marked, there will be a Video Insight camera installed in the same location as the access point, to minimize cost. Each location indicated requires two Category 6 data cable runs, even if only 1 device is to be installed at that location.

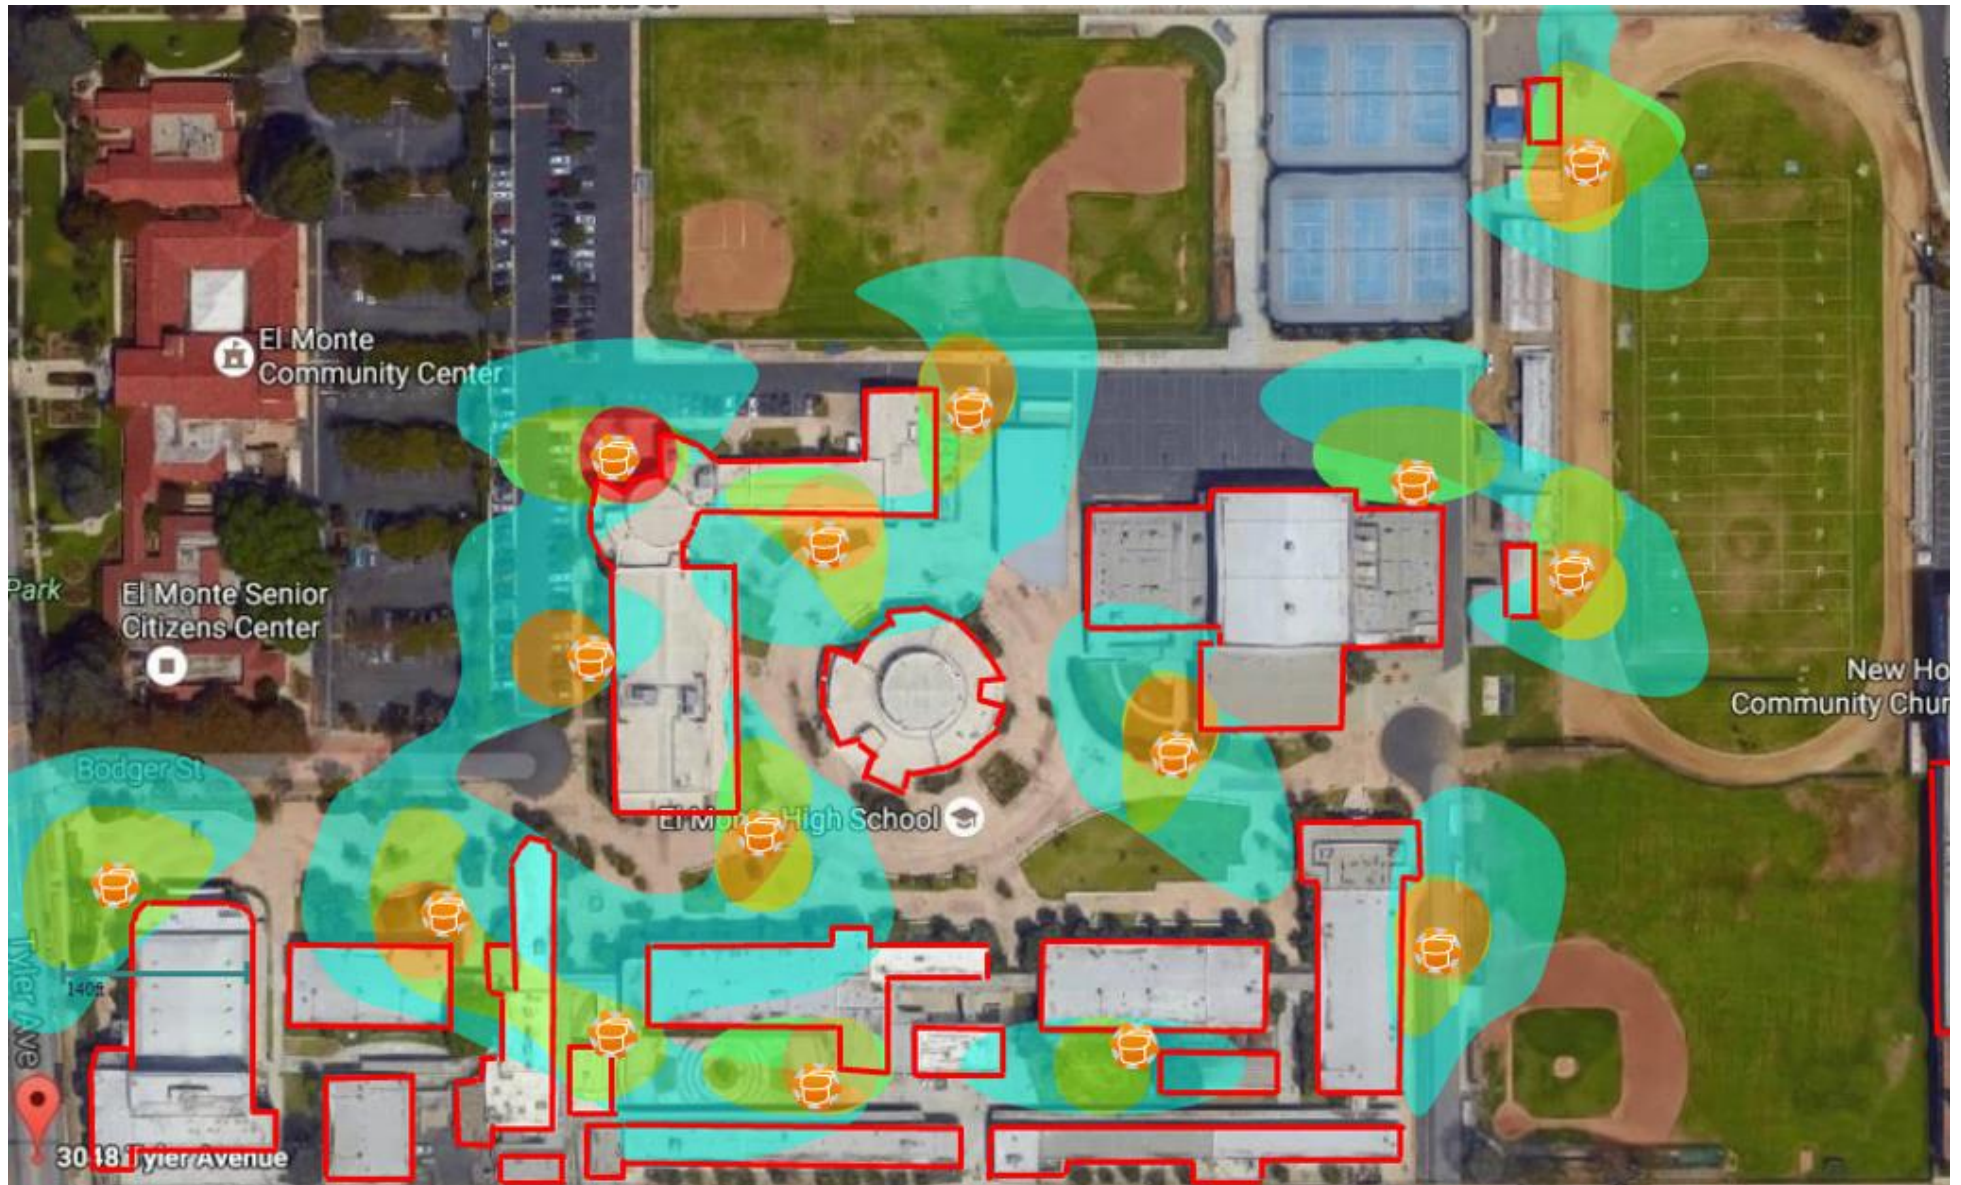

Arroyo High School – 16 Access Points

Note the two purple arrows. This signifies access point movements to allow greater wireless coverage and/or location movements to match up with camera installations.

El Monte High School – 15 Access Points
